

Blower VAF-400 is a lightweight yet powerful blower designed for versatile use on construction sites. Its compact and durable design makes it ideal for dust extraction during demolition, air circulation for drying alongside dehumidifiers, and ceiling dust removal during renovation projects.

All VAF series blowers are manufactured from impact-resistant plastic, equipped with a double casing, protective grilles on both sides, and a fully enclosed motor housing. A wide range of accessories is available, providing additional flexibility and applications.
