

SIDEFLOW CLEAN 5L FOR 800KW HOT WATER SYSTEMS

The **Sideflow Clean 5L** is a partial flow filter designed for continuous cleaning of central heating and cooling systems. When connected, approximately 10% of the main flow is filtered, ensuring that dirt and magnetite are efficiently captured by a combination of a filter bag and magnetic separation.

Key benefits include:

- Sidestream filtration for magnetic and non-magnetic impurities
- Quick and easy installation and maintenance
- Wall-mount bracket for simple setup
- Energy-saving insulation layer
- Can be installed for both right- and left-hand operation
- Suitable for water and glycol mixtures (max. 50%)

The **Sideflow Clean 5L** improves efficiency, reduces blockages, and extends the lifespan of heating and cooling installations.

SKU: 17020

TECHNICAL ATTRIBUTES

Käyttöpaine	0,2/16,0 bar	Kvs-arvo	67,2 m3/h
Järjestelmän enimmäiskoko	120 000 l	Virtauskapasiteetti	4,68 m3/h
Virtausnopeus (10 % järjestelmävirtaus)	1,3 l/s	Magneettitankojen määrä	2
		Volume	5,0 l
