

DEHUMIDIFIER TK60

The TK 60 dehumidifier is a TK series dehumidifier suitable for professional use that dries 60 litres of air in 24 hours. The dehumidifier has built-in automatic freeze protection as well as a hygostat that measures relative humidity throughout use. The humidity level can be set as desired.

The units are also modularly expandable, meaning they can be chained together using the socket on the side of the unit. Stackability makes storing and transporting several units considerably easier. Thanks to the built-in running hour meter, the units are also suitable for rental use.

With the TK60 dehumidifier it is possible to use either the container supplied for the water removed from the air or a drain hose (12 mm connection), the use of which is explained in the manual. Dehumidifiers are used, among other things, to speed up drying in new buildings, in renovation work and in connection with water damage.

TECHNICAL ATTRIBUTES

Ilmantuotto	1000 m ³ /h	Voltage	230V 50Hz
Kuivauskapasiteetti	60 l/24h	Mitat (L x P x K)	520 x 560 x 980 mm
Energiankulutus	1,2 kW	Weight	40 kg
		Sound level	56 db(A)
