SUBMERSIBLE PUMP STP2-480DW SET – FLAT SUCTION PUMP

Submersible Pump STP2-480DW Set – compact, efficient and ready-to-use for demanding dewatering tasks

The Submersible Pump STP2-480DW Set comes in a practical plastic storage case with hose and Storz couplings, ready for immediate use. Its compact and lightweight design combined with high efficiency makes it an excellent choice for demanding construction sites and fast dewatering needs.

The pump's innovative flat-bottom design enables water suction from as little as 1.0 mm depth. The built-in non-return valve prevents water backflow when the pump stops, while the rubber base plate protects surfaces from scratches.

Standard equipment includes thermal protection, a 10 m rope, a hose connector with 1" thread (Storz coupling optional), and a 10 m impact-resistant power cable (3×1.5 mm^2) with approved plug, plus hose and couplings. The hose is available either as a blue PVC hose or a white braided hose.

Particularly suitable for:

PÄÄOMINAISUUDET

- Draining rooms after water leakage
- Complete emptying of tanks after cleaning
- Emptying swimming pools
- Removing water from concrete surfaces
- Construction site dewatering

TEKNISET TIEDOT

Tuotekoodi	401010002	**Head**	max. 11 m
Size of cable entry	1"	**Weight**	14 kg
Voltage	230V	**Maximum particle size**	6 mm
Motor size	0,4 kW	**Hose length**	15m
Maximum flow rate	170 l/min
