

250A Main Switch Module for ABB Fastline Systems

The **250A main switch module** is designed for **TSR site distribution boards that utilize the ABB Fastline system**, making it ideal for construction sites and temporary electrical installations. The module is equipped with an **Eaton NZM2 compact circuit breaker**, which functions as both the main switch and overcurrent protection device, ensuring safe and reliable operation.

The main switch module includes an **integrated Spine monitoring system**, allowing remote monitoring and control of the construction site's electrical network in real time. Spine enables efficient tracking of energy consumption, load conditions, and system performance, supporting improved safety, optimized energy use, and proactive maintenance.

The module occupies **three module slots** in the distribution board, offering a compact yet powerful solution for high-current applications.

Manufactured in Finland, the 250A main switch module delivers high quality, durability, and advanced monitoring for demanding professional use in TSR site power solutions.
