

SCS-750 Fastline Modular Site Distribution Board for Flexible Construction Site Power

The **SCS-750 Fastline modular site distribution board** is a versatile **12-module-slot site distribution enclosure** built on the **ABB Fastline system**. It is designed to adapt to changing construction site requirements, allowing the internal configuration to be tailored precisely to each project.

By selecting only the required fuse outlets and components, unnecessary costs can be avoided. When the site changes, the internal setup can be reconfigured to match new demands. Unused module slots are safely covered with protective blank plates, ensuring a clean and secure installation.

The SCS-750 features **Spine readiness**, enabling easy integration of the Spine monitoring system, for example via a Spine main switch module. With Spine, an optional **load indicator light** can be added to visually display the distribution board's load level:

PÄÄOMINAISUUDET

- Green light below 65% load
- Yellow light at 65–85% load
- Red light above 85% load

TEKNISET TIEDOT

Tuotekoodi	505010013	**Short-circuit resistance**	Icf = 25 kA
Number of module slots	12	**Weight**	57 kg
Railing	630A	**Dimensions (folded)**	750 x 505 x 1060 mm
Enclosure class	IP44	**Dimensions (unfolded)**	750 x 705 x 1400 mm
